

Transport in the future

Trains

The
concept of
magnetic
levitation
system will
be
standart

Cars

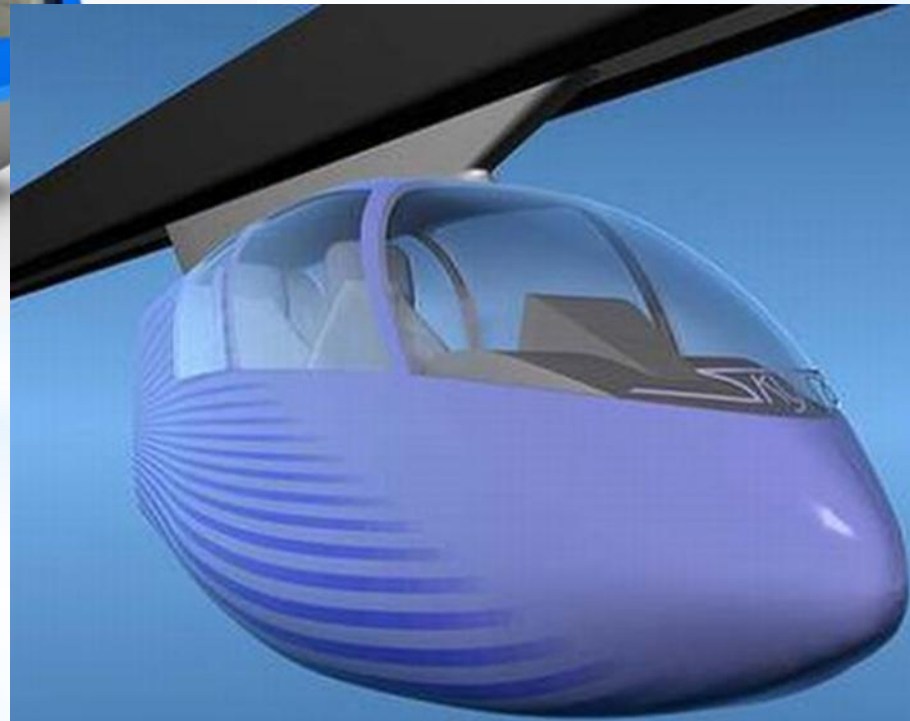

We will be using biofuels, hydrogen. There won't be any car crashes because cars will be controlled by autopilots.

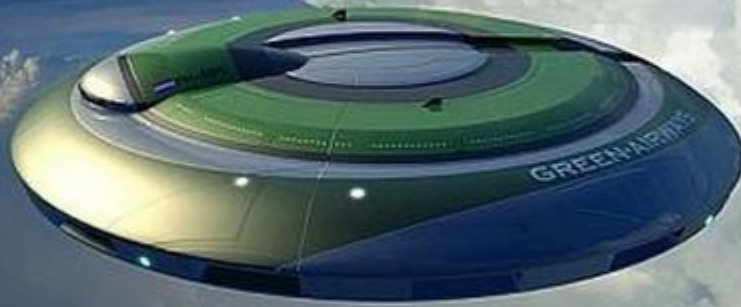

New means of transport

Fast tubes will be faster and safer than other transport.

People will be able to fly and relax in the sky and enjoy the view of the city.

Concept Design by Alendro
alendro.carbonmade.com

It will be a common way how to travel to space in other planets

Transport under the water

In the future the cars will be able to travel under the water and can be dived up to 10 meters or 33 feet below the surface.

Thank you for your
attention 😊
